

Voltmaker

The Voltmaker is power in your hand. With its simple, fast and fun charging system, anyone can generate energy to power all kinds of mobile devices, any time anywhere. The playful system uses kinetic energy and converts it into electrical energy to charge the devices. It can also be used as a plug-

in adaptor to charge a lamp, for example. Moreover, the Voltmaker is environmentally friendly and the perfect accessory for camping trips, trekking or simply for use as a back up. It could also be a solution for providing energy in countries where electricity sources are unreliable.

DESIGNER: Mathieu Ballet for The Volt Makers
 YEAR OF DEVELOPMENT: 2013
 MAIN MATERIAL: aluminum
 MAIN GREEN STRATEGIES: energy efficiency, green lighting, green technology, kinetic energy, renewable energy

Design:
Mathieu Ballet
